

Introduction to Implants

A 2-day Course for the Dentist New to Implant Placement

Course Description and Objectives

This course is intended as an introductory course for dentists who want to integrate both the surgical and restorative phases of dental implants into their daily practice. Patient selection, treatment planning, critical anatomical structures when considering dental implants, and surgical placement, as well as restorative options with the Camlog implant system, are presented and discussed.

After attending this course the dentist will be able to:

- select patients for straightforward implant surgery and restoration
- treatment plan the case
- choose the appropriate surgical and restorative approach and Camlog components for the case
- understand pre- and post-operative care

Course Content

- Why implants
- Anatomy and important structures
- Patient selection, diagnosis and treatment planning
- Surgical and restorative principles
- Introduction to surgical and restorative aspects of the Camlog system
- Surgical and restorative hands-on: every participant can place their own implant

About Our Educators

CAMLOG has partnered with experienced clinicians who have long offered dental implants as important treatment options for their own patients. These experienced clinicians have made it their mission to train CAMLOG users, so that they will also have the opportunity to add this great treatment option to their practice, both surgically and restoratively. For bios of the educators, please visit our website. www.camlogimplants.com

CE Credits

This course qualifies for 16 hours of continuing education credit. The course runs for two days, from 8 am to 5 pm each day. Teaching methods: Lecture and hands-on.

Support for this activity generously provided by Camlog.
